

STILLE Surgical Instruments

I över 170 år har vi utvecklat och tillverkat de bästa kirurgiska instrumenten till världens mest krävande kirurger. Vi vill rikta ett stort tack till alla våra trogna kunder och samtidigt välkomna våra nya kunder. I den här katalogen presenterar vi vårt nya sortiment som är indelat i tre huvudkategorier; det klassiska, det ortopediska samt instrument lämpliga för plastikkirurgi.

STILLE CLASSIC

Det klassiska sortimentet är vår bas, vår över 170-åriga historia, vår ryggrad. Här hittar du våra saxar, allt från vanliga operationssaxar till våra unika SuperCut-saxar. Du hittar även STILLES klassiska pincetter, våra eleganta nålförare, peanger, klämmare, tänger, kyretter och hakar samt mikroinstrument. Gemensamt för instrumenten är att de alla är smidiga med lätt gång. Deras balans, eleganta utformning och ergonomi möjliggör långa och komplicerade ingrepp med största säkerhet. Instrumenten tillverkas för hand i vår unika smidesprocess av våra skickliga instrumentmakare med den kvalitet och fingertoppskänsla som STILLE är känd för.

ORTOPEDISK KIRURGI

För krävande ortopedier kan vi nu erbjuda ett starkt och brett sortiment. Det rymmer allt från gougetänger, osteotomer, hakar, slevor och raspatorier till hammare. Fortfarande är vi mest stolta över att ha utvecklat den första dubbelledade gougetången (sid 93-99). Vi uppfann även världens första osteotom med det klassiska 8-kantiga handtaget (sid 172). Båda har sedan dess kopierats, men en kopia kan aldrig mäta sig med originalet.

PLASTIKKIRURGI

Vi har spetsat sortimentet med många nya instrument för plastikkirurgi. De klarar de flesta ingrepp inom såväl rekonstruktiv som kosmetisk plastikkirurgi. Mikroinstrument och Facelift-saxen är bara ett par exempel. Kännetecknen för STILLES instrument är att de är lätta och gracila och fungerar perfekt under ingrepp som kräver extrem precision. Instrumenten blir en naturlig förlängning av kirurgens hand. Alltid med ett perfekt resultat.

For over 170 years, we have developed and manufactured the best surgical instruments for the world's most demanding surgeons. We would like to extend a heartfelt thank you to all our loyal customers and a warm welcome to our new customers. In this catalog we present our new product range that is now divided into three main categories: classic, orthopedic and instruments suitable for plastic surgery.

STILLE CLASSIC

The classic category is our base, and has been our backbone throughout our 170 year history. Here you will find our line of scissors, everything from common surgical models to our unique SuperCut scissors. You'll also find STILLE classic forceps, our elegant needle holders, artery forceps, clamps, rongeurs, curettes and retractors as well as micro instruments. Common to all of our instruments is that they are smooth and easy to operate. Their outstanding balance, elegant design and ergonomics allow long and complex procedures with the utmost security. Using our own unique forging process, our skilled craftsmen handcraft every instrument and provide the high quality and fingertip feeling that STILLE is known for.

ORTHOPEADIC SURGERY

For demanding orthopedic surgeons, we offer an outstanding range of instruments. The assortment includes everything from bone rongeurs, osteotomes, retractors, curettes and scrapers to hammers. We are still proud to have developed the first double-action bone rongeur (pp. 93-99). We also invented the world's first osteotome with the classic 8-sided handle (page 172). Both instruments have since then been copied, but a copy can't measure up to the original.

PLASTIC SURGERY

We have added many new instruments for plastic surgery. These instruments can handle most procedures in the field of reconstructive and cosmetic surgery. Micro Instruments and Facelift-scissors are just two examples. STILLE instruments are known to be light and graceful and to function perfectly during procedures requiring extreme precision. The instruments become a natural extension of the surgeon's hand – and the result is always perfect.

Innehåll | Table of contents | Inhaltsverzeichnis | Indice | Tabla de contenido | 目次

12 Saxar | Scissors | Scheren | Forbici | Tijeras | 剪刀 (はさみ)

- 16 Ögonsaxar | Eye Scissors | Augenscheren | Forbici oculistiche | Tijeras oculares | 眼科剪刀
- 17 Ögonlockssaxar | Blepharoplasty Scissors | Blepharoplastik-Scheren | Forbici per blefaroplastica | Tijeras de Blefaroplastia | 眼瞼形成用剪刀
- 18 Dissektionssaxar | Dissecting scissors | Präparierscheren | Forbici da dissezione | Tijeras para disección | 剥離・切離用剪刀
- 28 Operationssaxar | Operating scissors | Chirurgische Scheren | Forbici chirurgiche | Tijeras para cirugía | 外科剪刀
- 31 Tenotomisaxar | Tenotomy scissors | Sehenscheren | Forbici per tenotomia | Tijeras para tenotomía | 腱切除用剪刀
- 33 Kärlsaxar | Vascular scissors | Gefäßscheren | Forbici vascolari | Tijeras vasculares | 血管剪刀
- 34 Nässaxar | Nasal scissors | Nasenscheren | Forbici nasali | Tijeras nasales | 鼻用剪刀
- 38 Face-lift saxar | Face-lift scissors | Face-lift Scheren | Forbici face-lift | Tijeras face-lift | フェイスリフト用剪刀
- 41 Trådföringssaxar | Suture carrying scissors | Fadenführungsscheren | Forbici portafilo | Tijeras portahilos | 縫合糸保持剪刀
- 42 Sutursaxar | Suture scissors | Fadenscheren | Cesoi per suture | Cizallas para suturas | 抜糸用剪刀

44 Pincetter | Forceps | Pinzetten | Pinze | Pinzas | 鑷子 (ピンセット)

- 46 Pincetter | Forceps | Pinzetten | Pinze | Pinzas | 鑷子 (ピンセット)
- 49 Anatomiska pincetter | Dressing forceps | Anatomische Pinzetten | Pinze anatomiche da dissezione | Pinzas de disección | 包帶鑷子
- 51 Durapincetter | Dura forceps | Durapinzetten | Pinze per dura madre | Pinzas para dura-madre | 硬膜鑷子または5爪鑷子
- 52 Irispincetter | Iris forceps | Irispinzetten | Pinze per iride | Pinzas para iris | 眼科鑷子
- 53 Kärlpincetter | Vascular forceps | Gefäßpinzetten | Pinze vascolari | Pinzas vasculares | 血管鑷子
- 54 Diatermipincetter | Diathermy forceps | Diathermiepinzetten | Pinze per diatermia | Pinzas para diatermia | ジアテルミー鑷子
- 55 Knutpincetter | Knot-holding forceps | Knüpfpinzetten | Pinze per nodi | Pinzas para nudos | 結び目保持鑷子

56 Peanger | Artery forceps | Arterienklemmen | Pinze emostatiche | Pinzas hemostáticas | 止血鉗子

- 58 Peanger | Artery forceps | Arterienklemmen | Pinze emostatiche | Pinzas hemostáticas | 止血鉗子
- 70 Artär- och ligaturklämmare | Artery and ligature clamps | Arterien- und Ligaturklemmen | Pinzas per arterie e legature | Pinzas para arterias y ligaduras | 結紮鉗子および剥離鉗子

72 Nålförare | Needle holders | Nadelhalter | Portaghi | Porta-agujas | 持針器

- 74 **Nålförare storlekstabell** | Needle holder in relation to suture size | Nadelhalter in Relation zur Stärke des Nahtmaterials | Il portaaghi in relazione alla misura della sutura | Porta-agujas en relación al tamaño de la sutura | 縫合糸サイズに適する持針器
- 75 **Nålförare** | Needle holders | Nadelhalter | Portaghi | Porta-agujas | 持針器
- 84 **Knuthållartänger** | Knot-holding Forceps | Knüpfzangen | Pinze portanodi | Pinzas para atar nudos | 結び目保持鉗子
- 85 **Ståltrådsroterare & hållare** | Wire Twisting & Holding Forceps | Draht-Dreh- und Haltezange | Pinza serra-fili | Pinzas cierra-hilos y pinzas para extraer alambres | ワイヤー鉗子

86 Bentänger | Bone cutters and rongeurs | Knochen & hohlmeisselzangen | Cesoié per ossa & pinze sgorbie | Pinzas cortantes & pinzas-gubias | 骨剪刀および骨鉗子(ロンジュール)

- 88 **Platttänger** | Flat pliers | Flachzangen | Tenaglia piatta | Alicates planos | ペンチ(シングルアクション)
- 89 **Extraktionstänger** | Extraction pliers | Extraktionszangen | Pinze d'estrazione | Pinzas de extracción | ペンチ(ダブルアクション)
- 90 **Benavbitare** | Bone cutting forceps | Knochensplitterzangen | Cesoié per ossa | Pinzas cortantes | 骨切り鉗子
- 92 **Gougetänger** | Bone rongeurs | Hohlmeisselzangen | Pinze-sgorbie | Pinzas-gubias | 骨鉗子(ロンジュール)
- 100 **Benhållartänger** | Bone holding forceps | Knochenhalte-zangen | Tenaglie per ossa | Pinzas para hueso | 骨保持鉗子
- 101 **Trådavbitare** | Wire cutters | Drahtkneifzangen | Tenaglie tagliafili | Alicates corta-alambres | ワイヤーカーター
- 103 **Laminektomistansar** | Laminectomy punches | Laminektomiestanzen | Pinze taglienti per laminectomia | Pinzas cortantes para laminectomía | 椎弓切除用パンチ(ケリソンパンチ)
- 105 **Bittänger** | Rongeurs for intervertebral discs | Bandscheiben-Rongeur | Pinze taglienti per dischi intervertebrali | Pinzas cortantes para discos intervertebrales | 骨鉗子(ボーンロンジュール)

108 Klämmare | Clamps | Klemmen | Pinze | Pinzas | 血管鉗子および組織把持鉗子

- 110 **Colonklämmare** | Colon Clamps | Colonklemmen | Pinze per colon | Pinzas para colon | 結腸鉗子
- 111 **Galltänger** | Gall duct clamps | Gallenkanalklemmen | Pinze per vie biliari | Pinzas para conductos biliares | 胆管クランプ
- 112 **Universalklämmare** | Multi-purpose clamps | Mehrzweckklemmen | Pinze per applicazione universale | Pinzas de múltiple uso | 多目的クランプ
- 115 **Tangential occlusionsklämmare** | Tangential occlusion clamps | Tangential-Verschlussklemmen | Pinze per occlusione tangenziale | Pinzas tangentes de oclusion | 正接鉗子
- 117 **Perifera kärlklämmare** | Peripheral vascular clamps | Peripheralklemmen | Pinze per vasi periferici | Pinzas para vaso periférico | 末梢血管クランプ
- 118 **Anastomosklämmare** | Anastomosis clamps | Anastomosenklemmen | Pinze per anastomosi | Pinzas para anastomosis | 吻合クランプ
- 119 **Aorta anastomosklämmare** | Aortic-anastomosis clamps | Aorten-Anastomosenklemmen | Pinze per anastomosi dell'aorta | Pinzas para anastomosis aórtica | 大動脈吻合クランプ

- 120 **Aorta-aneurysmklämmare** | Aortic-aneurysm clamps | Aorten-Aneurysmenklemmen | Pinze per aneurisme aortiche | Pinzas de aneurisma aórtica | 大動脈瘤クランプ
- 121 **Carotisklämmare** | Carotid clamps | Carotisklemmen | Pinze carotidee | Pinzas para carótida | 頸動脈クランプ
- 122 **Profunda arteria femoralis klämmare** | Profunda femoral artery clamps | Profunda Arteria Femoralis Klemmen | Pinze per arteria femorale profunda | Pinzas para arteria femoral profunda | 大腿深動脈クランプ
- 123 **Dukklämmare** | Towel clamps | Tuchklemmen | Fissatele | Pinzas de campo | タオル鉗子
- 124 **Fattningstånger** | Intestinal grasping forceps | Darmfasszangen | Pinze per afferrare l'intestino | Pinzas para coger intestinos | 腸管把持鉗子
- 127 **Ringtänger** | Sponge holding forceps | Schwammzangen | Pinze per spugne | Pinzas para esponjas | スポンジ鉗子
- 129 **Klotånger** | Tenaculum forceps | Hakenzangen | Pinze per il collo dell'utero | Pinzas para coger el cuello del útero | 子宮支持鉗子 スポンジ鉗子

Sök och finn | Search and find

Katalogen är sökbar på två kirurgiska discipliner – plastikkirurgi och ortopedi. Längst bak i katalogen finns ett artikelnummerregister och ett produktnamnregister på svenska och engelska. Det finns även ett register för produkter inom de prioriterade områdena plastikkirurgi och ortopedi. Här nedan visas några förklaringar till produktgrupperna.

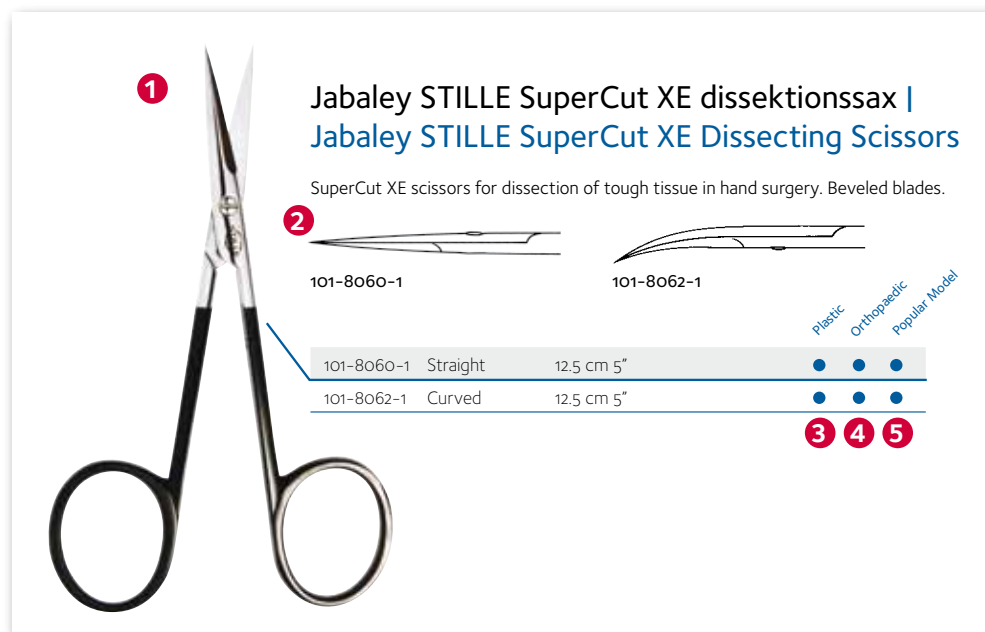

The catalogue is searchable from two surgical disciplines – plastic surgery and orthopaedics. The back of the catalogue contains an item number directory and product name registers in Swedish and English. There is also a register for product listings in the priority areas of plastic surgery and orthopaedics. Below you will find some descriptions of the product groups.

Plastic Orthopaedic Popular Model

3 4 5

5 POPULÄR MODELL
Instrument märkta med "Popular model" är våra mest populära instrument som ofta kan skickas direkt vid beställning. Tillfällig slutförsäljning kan dock uppstå och leverans sker då så snart nästa parti är färdigt. Vi strävar alltid efter kortast möjliga leveranstid.

POPULAR MODEL
Instruments marked as "Popular model" are the most sold STILLE instruments. They are often available for immediate delivery. In some cases stock may be temporarily sold out and delivery will occur as soon as the next production batch is ready. We always try to make the time from order to delivery the shortest possible.

3 PLASTIKKIRURGI
Lätta och gracila instrument för ingrepp med stora krav på precision.

PLASTIC SURGERY
Lightweight and graceful instruments for procedures requiring high precision.

4 ORTOPEDI
Lätta, gracila och hållbara instrument lämpliga för ortopedi.

ORTHOPAEDIC
Lightweight, graceful and durable instruments suitable for orthopaedics.

Historien

När Sverige med Serafimerlasarettet fick sitt första undervisningssjukhus 1752 tog den medicinska vården ett stort steg framåt. Men hundra år senare fanns det fortfarande inte fler än 200 kirurger i hela landet. Med inrättandet av Karolinska institutet 1810 förenades de två grenarna medicin och kirurgi och studenter utbildades nu i både invärtes och utvärtes sjukdomar. Dessutom anställde Karolinska institutet en instrumentmakare som utöver tillverkning även gav utbildning i instrumentvård.

Det var den verksamheten på Karolinska institutet som Albert Stille tog över 1841 när han startade sitt företag. Redan från början förde han en intensiv dialog med läkare och kirurger. Ofta vände de sig direkt till honom och hans medarbetare med förslag och instrumentmakarna var alltid lika ivriga att förverkliga deras idéer. Den här nära relationen mellan ett medicekniskt företag och olika medicinska institutioner var avgörande för den snabba utvecklingen inom medicin och kirurgi under 1800-talet.

De nyvunna kunskaperna inom mikrobiologi ledde till att man började sterilisera instrument, vilket minskade smittorisken för såväl patienter som kirurger och operationsassistenter. Och med viktiga upptäckter inom anestesi och antiseptisk sårbehandling vågade sig kirurgerna på allt djärvare ingrepp. Med hjälp av förfinade instrument skaffade de sig snabbt nya viktiga erfarenheter.

STILLE var först i världen med den tvådelade bentången redan 1872. Även andra produkter som revbenstången och gipssaxen gick hela tiden hand i hand med den snabba utvecklingen. Den nickelpläterade förlossningsstången kom 1877. Ytan stod emot påverkan från blod och var lättare att rengöra. Förnicklade instrument blev därefter standard på marknaden tills STILLE 1923 introducerade världens första instrument i rostfritt stål. Och med SuperCut 1982 skapades en unik kvalitetssax som fortfarande söker sin like i världen.

Albert Stille valdes 1868 in som ledamot av Svenska läkaresällskapet. *"För hans förtjänster om den kirurgiska och obstetriska instrumenttillverkningen i vårt land och de flera lyckliga dels egna uppfinningar, dels förbättringar av förutvarande modeller"*. Så löd rekommendationen från professorer och kirurger vid Serafimerlasarettet och Karolinska institutet. Nio år senare valdes även sonen Max in som ledamot.

Albert och Max Stille delade en äkta, livslång passion för att utveckla kvalitetsinstrument. Mer än 170 år senare lever deras fasta övertygelse, starka framåtanda och förtroagna samarbete med läkare och kirurger fortfarande kvar hos STILLE.

Karolinska institutet och Serafimerlasarettet på 1860-talet.
Karolinska Institute and Serafimer Hospital in the 1860's.

History

When the Serafimer Hospital in Stockholm became Sweden's first teaching hospital in 1752, medical care in the country took a great step forward. But one hundred years later there were still no more than 200 practicing surgeons in the country. With the establishment of the Karolinska Institute in 1810, the two branches, medicine and surgery, were united and students were educated in both internal and external diseases. In addition, the Karolinska Institute commissioned an instrument maker that went beyond manufacturing but also provided training regarding instrument care.

It was this business at the Karolinska Institute that Albert Stille took over in 1841 when he started his company. From the outset, he maintained an intensive dialogue with physicians and surgeons. Often, they turned directly to him and his colleagues with suggestions, and the instrument makers were always eager to realize their ideas. This close relationship between a medical device company and various medical institutions was crucial to the rapid developments that occurred in medicine and surgery in the 1800's.

The newly gained knowledge in microbiology led to sterilization of instruments, which reduced the risk of infection for patients, surgeons and surgical assistants. And with important discoveries in anesthetics and antiseptic wound treatment, surgeons dared to undertake increasingly bold surgical procedures. With the help of sophisticated new instruments, surgeons rapidly acquired important new experience.

STILLE was the first in the world with the double-action bone rongeur as early as 1872. Other instruments like rib forceps and plaster scissors also contributed to the rapid development. The nickel-plated obstetrical forceps came in 1877. The surface was blood resistant and was easier to clean. Nickel-plated instruments became the market standard until 1923 when STILLE introduced the world's first stainless steel instruments. And

with the SuperCut in 1982, STILLE created a unique quality scissors that are still unmatched in the world.

In 1868 Albert Stille was elected as a member of the Swedish Society of Medicine. *"For his merits in the area of surgical and obstetrical instrument manufacturing in our country, and the success of their own inventions, and improvements to previous designs."* Those were the words at his induction from professors and surgeons at the Serafimer Hospital and the Karolinska Institute. Nine years later, his son Max was also voted in as a member.

Albert and Max Stille shared a genuine, lifelong passion for developing quality instruments. More than 170 years later, their firm convictions, strong ambitions and earnest collaboration with physicians and surgeons still live on with STILLE.

Hantverk och service

Järnsmede med manufaktur av knivar, saxar, tänger och hammare har länge varit hjärtat i Eskilstunas industrihistoriska arv. STILLE är det enda medicintekniska företag i världen som fortfarande tillverkar instrument från rundstål i egen smedja. Än idag kan man höra hur hejarhammare slår ut det uppvärmda stålämnet, rikthammarnas lätta slag mot skänklar och käftar och filarnas torra raspande mot det ohärdade stålet.

För instrumentmakarna har tillverkningen alltid behållit sin hantverksmässiga karaktär. Här förlitar man sig inte enbart på ritningar utan precis lika mycket på den egna känslan för funktion och egenskaper. Ett färdigt instrument fungerar som modell. Måtten sitter redan i nävarna. Instrumentmakarna känner den exakta böjningen med fingrarna och vet hur ett perfekt instrumentet känns i handen. Minsta defekt märks direkt.

Den där speciella fingertoppskänslan för funktion och egenskaper delar instrumentmakaren med kirurgen. Genom åren har STILLE samarbetat med en lång rad välkända kirurger över hela världen. De har på olika sätt

medverkat vid konstruktion och vidareutveckling. Deras erfarenhet och uppfinningsrikedom har ytterligare förfinat instrumenten. Därför kan en lång rad välkända kirurgers namn läggas till STILLES eget i sortimentet.

Instrumentmakarens sista arbetsmoment är att sätta firmamärket på det färdiga instrumentet. Under mer än 170 år har det kommit att stå för ett gediget hantverk, suverän funktion och överlägsen kvalitet. Det har gjort STILLE till ett osvikligt kännetecken för de unika instrumentegenskaper som kirurger världen över efterfrågar.

Alla instrument som regelbundet servas av STILLES skickliga instrumentmakare omfattas av en exklusiv 30-årsgaranti. Under servicen plockas instrumenten isär och rengörs in i minsta detalj, rörliga delar justeras och smörjs, saxblad slipas, eggar vässas, ytor renoveras och putsas innan instrumenten till slut funktionstestas. Den här noggranna omsorgen förlänger instrumentets livslängd och ökar patientsäkerheten.

Craftsmanship and Service

Iron working and the manufacture of knives, scissors, pliers and hammers have long been at the heart of the city of Eskilstuna's industrial heritage. STILLE is the only medical instrument maker in the world that still manufactures instruments from tubular steel in their own forge. Even today, one can hear the beat as the drop hammer flattens the heated steel slabs, the light blow of chasing hammers to the shanks and jaws, and the dry rasping of files against the unhardened steel.

For makers of precision surgical instruments, production has always maintained its artisanal character. They rely not only on drawings but, just as much, on their own sense of functionality and feature. A complete instrument works like a model. The dimensions are already in the hands. Instrument makers know the precise bend with their own fingers, and they know how a perfect instrument should feel in the human hand. Minimum defects are immediately evident.

Instrument makers share that special fingertip sense of functionality with the surgeon. Through the years, STILLE has collaborated with a long list of renowned surgeons the world over. They have contributed in various ways to the construction and further development. Their experience and ingenuity has helped to further refine surgical instruments. Therefore, many wellknown surgeons' names have been added to STILLE's wide range of instruments.

An instrument maker's final task is to put the company name on the finished instrument. For more than 170 years, it has come to stand for solid craftsmanship, superb performance and superior quality. This has made the STILLE name synonymous with the unique features and performance that surgeon's around the world demand.

All instruments that are regularly serviced by STILLE's skilled technicians are covered by an exclusive 30-year warranty. During the service process the instruments are disassembled and cleaned thoroughly, moving parts are adjusted and lubricated, scissor blades are sharpened, edges are honed, surfaces refinished and cleaned before the instruments undergo comprehensive testing. This meticulous maintenance prolongs the life of the instrument and increases patient safety.

“SCISSORS, PLEASE!” Kirurger över hela världen föredrar STILLEs saxar. De är lätta och välbalanserade med en jämn, mjuk känsla som följer minsta rörelse så att saxen blir en naturlig förlängning av handen. Saxens utformning ger ett fast grepp med maximal klippförmåga för alla typer av mjuk vävnad. Oavsett modell är precisionen perfekt, hela vägen ut i spetsarna.

Sedan STILLE uppfann den första SuperCut-saxen redan 1982 har många försökt sig på att kopiera den. Men efter tre decennier kan fortfarande inget annat fabrikanter mäta sig med denna handtillverkade supersax. En av de främsta egenskaperna är de specialdesignade skärytorna. Med ett saxslipat och ett knivslipat blad skär sig saxen mjukt och effektivt genom vävnaden. Snittet blir perfekt. Varje gång.

Saxsortimentet har utökats med ergonomiska saxar med vinklade skänklar för ett bekvämare grepp. Precis som alla andra saxar från STILLE är de högglanspolerade och kan vid service tas isär för enklare rengöring och sterilisering. Det ökar säkerheten för patient och kirurg samt förlänger instrumentets livstid. All service sköts av våra egna skickliga instrumentmakare. En sax från STILLE behåller sin höga kvalitet år efter år.

“SCISSORS, PLEASE!” Surgeons worldwide prefer scissors from STILLE. They are light and well-balanced with a smooth, soft feel that follows every movement so that the scissors become a natural extension of the hand. The scissor’s design provides a firm grip with maximum cutting power for all types of soft tissue. Regardless of the model they are perfectly precise – all the way to the tip.

Since STILLE invented the first SuperCut-scissors back in 1982, many have attempted to imitate the design. But after three decades no other brand can measure up to the handmade craftsmanship of the SuperCut. One of the main features is the specially designed cutting surfaces. With one scissor blade and one knife blade the scissors cut smoothly and efficiently through soft tissue. A perfect cut. Every time!

The product line has been expanded to include ergonomic scissors that feature angled handles for a more comfortable grip. Like all scissors from STILLE they are highly polished and can be disassembled for easy maintenance, cleaning and sterilization. This increases safety for the patient and the surgeon and extends the instrument’s effective lifetime. All service is handled by our own skilled craftsmen. A pair of scissors from STILLE retains their high quality year after year.

STILLE Ögonsax | STILLE Eye Scissors

ORIGINAL

Saxar har alltid tillhört STILLES storsäljare alltsedan de började tillverkas på 1800-talet. Genom åren har de ständigt förbättrats och fler specialmodeller har tillkommit. Idag finns de i totalt ca 200 varianter i alla storlekar och utformningar.

Originalsaxarna tillverkas i rostfritt stål av högsta kvalitet med höglanspolerad yta. De är välbalanserade med god skärstyrka ända ut i spetsarna och ligger bra i handen. Det finns originalsaxar för alla typer av mjukvävnad och de kan även användas för att klippa gasbinda, tråd och suturer.

SUPERCUT

Saxarnas sax uppfanns 1982. Många kirurger anser att SuperCut är världens absolut bästa kirurgisax. Den passar alla typer av mjuk vävnad och precisionen och prestandan är välkänd bland kirurger över hela världen.

Det revolutionerande med SuperCut är skärytorna som samarbetar på ett unikt sätt. Det ena bladet är saxslipat och det andra är knivslipat så att saxen skär sig fram genom vävnaden. Det ger maximal skärstyrka med minimal kraft och ett perfekt snitt. Slipningen gör saxen lämplig för både höger- och vänsterhänta. Trots många år på marknaden har ingen lyckats skapa en kopia som kan överträffa originalet.

ORIGINAL

Scissors have always been STILLE's bestseller ever since they were first produced in the 1800's. Through the years they have been continually improved and more special models have been introduced. Currently, there are in total about 200 different varieties in all sizes and shapes.

Our original scissors are manufactured of the highest quality, polished stainless steel. They are well balanced with outstanding cutting power right down to the tips and they fit well in the surgeon's hand. There are original scissors for all types of soft tissue and they can also be used to cut gauze, wire and sutures.

SUPERCUT

These unique scissors were introduced in 1982. Many surgeons believe that the SuperCut are unsurpassed as the world's best surgical scissors. They are suitable for all types of soft tissue and the precision and performance are well known among surgeons worldwide.

The revolutionary SuperCut scissors feature cutting surfaces that work together in a unique way. One blade is a scissor blade and the other is a knife blade to enable the scissors to cut precisely through the soft tissue. They provide maximum cutting power with minimal force and produce a perfect cut. The sharpening makes the scissors suitable for both right and left handed users. Despite many years on the market, other brands have not been able to create an imitation that can surpass the original SuperCut scissors.

ERGONOMISKA SAXAR

En naturlig fortsättning på arbetet med att skapa perfekta saxar har varit att vidareutveckla deras ergonomiska egenskaper. Kirurgiska saxar hålls normalt i ett precisionsgrepp med tummen och lång- eller ringfingret. Vid mer tidskrävande ingrepp tröttnar handen ut snabbare.

Lösningen är att vinkla skänklarna så att handen kan arbeta närmare sitt normala viloläge. Med ett större mellanrum mellan fingeröglorna motverkas spänningar och trötthet och handen orkar arbeta längre. Samtliga ergonomiska saxar är av modellen SuperCut med sina unika egenskaper. Sax- och knivslipade blad samverkar för maximal skärstyrka med minimal kraft och exakt precision.

ERGONOMIC SCISSORS

A natural extension of the ongoing effort to create the perfect scissors has been the further development of their ergonomic properties. Surgical scissors are normally held in a precise grip using the thumb and middle or ring finger. For more time-consuming procedures this can cause the hand to become fatigued faster.

The solution is to angle the shanks so that the hand can work closer to its normal resting position. With a larger gap between the finger loops, tension and fatigue is countered and the hand can work more comfortably for a longer period. All ergonomic scissors are SuperCut models with their unique characteristics. Scissor and knife sharpened blades work together for maximum cutting power with minimal effort and exact precision.

STILLE ögonsax | STILLE Eye Scissors

Delicate eye scissors with sharp or blunt tips and large finger rings. These are also called iris scissors and are used for nerves, tendons and vessels. They are intended for facial surgery and any type of delicate surgery. Beveled blades.

SOM EN FÖRLÄNGNING av kirurgens tumme och pekfinger måste pincetten kunna fatta och släppa taget med samma känslighet som hos ett par fingertoppar. Klorna på de kirurgiska pincetterna är därför speciellt formgivna för att fatta ett fast, men ändå mildt, grepp om vävnaden. De anatomiska pincetterna är tillverkade för att kunna ta ett så atraumatiskt grepp som möjligt om känslig vävnad.

Det är finjusteringen som skapar den perfekta balansen med ett följsamt, fjädrande motstånd och ett stadigt grepp. Den karrerade ytan ökar greppbarheten ytterligare. Det ger kirurgen full kontroll samtidigt som det orsakar så lite skada på vävnaden som möjligt.

Pincetten hör till de kirurgiska instrument som grundaren Albert Stille lärde sig att tillverka från grunden redan under sina lärlingsår på 1830-talet. Ett till synes enkelt hjälpmedel som dock kräver exakt precision vid tillverkningen. Genom åren har STILLES pincetter fortsatt att förfinas och de är idag erkända för sin unikt mjuka känsla och goda balans i kombination med sin oöverträffade livslängd.

AS AN EXTENSION OF THE SURGEON'S THUMB and forefinger, forceps need to grasp and release with the same sensitivity as a pair of fingertips. The claws on surgical forceps are specially designed to make a firm, yet gentle, grasp of the tissue. The anatomical forceps are designed, as much as possible, to take an atraumatic grip on sensitive tissue.

It is the fine tuning that creates the perfect balance with a smooth, resilient spring action and a firm grip. The surface grooves increase gripping power even further. This gives the surgeon full control while causing as little harm to the tissue as possible.

Forceps are among the surgical instruments that founder Albert Stille learned to make from scratch during his apprenticeship in the 1830's. Forceps are seemingly simple instrument but still demands ultra-precision in the manufacturing process. Over the years, STILLE's forceps continue to be refined and are today recognized for their unique feel and excellent balance in combination with unsurpassed longevity.

STILLES PEANGER har en unik och gracil design med mjuka former, alltid med kirurgens specifika behov i fokus. Det öppna boxlåset förenklar rengöringen och minimerar risken för att kirurgens handskar eller suturer ska fastna i instrumentet. Utformningen av det speciella knäppet är unik och håller alltid peangen stängd i en säker position. Samtidigt är knäppet mycket lätt och smidigt att öppna så att kirurgen hela tiden har full kontroll.

Käftarna har rundade kanter och perfekt passform mot varandra. Det finns ingen risk för att de ska släppa greppet. Peangen stängs och öppnas lika snabbt och smidigt med ett enkelt handgrepp. Därför upplevs den som mycket mjukare och med en spänst som inga andra fabrikat kan erbjuda.

Konstruktionen har fortsatt att förbättras under årens lopp och många försök har gjorts att kopiera STILLES egenutvecklade design. Den oöverträffade livslängden gör peangerna till en god investering som kan användas under många år.

STILLE'S ARTERY FORCEPS have a unique and graceful design featuring soft shapes, always with the surgeon's specific needs in mind. The open box lock simplifies cleaning and minimizes the risk of the surgeon's gloves or sutures becoming entangled in the instrument. The design of the special ratchet is unique and always keeps the forceps closed in a secure position. At the same time the ratchet is very easy and convenient to open, giving the user full control.

The jaws have rounded edges and fit perfectly together. There is no risk of losing grip. The instrument closes and opens quickly and smoothly with a simple operation. STILLE artery forceps have a softer feel with performance properties that no other brand can offer.

The manufacturing technique has continued to improve over the years and many attempts have been made to imitate STILLE's proprietary design. The unsurpassed longevity makes these instruments a good investment that will be in service for many years.

FÖR ETT FULLGOTT RESULTAT VID SUTURERING krävs ett pålitligt och tåligt instrument. STILLEs nålförare känns lätt igen på den gracila och mjuka designen vilket hjälper kirurgen att hålla nålen i ett mycket säkert grepp. De gyllene fingeröglorna indikerar att käftarna är försedda med inlägg av hårdmetall vilket förlänger hållbarheten. Vissa nålförare är istället belagda med Diamond Jaws där hårdmetallen har sprutats på som ett tunt skikt på insidan av käftarna.

Ett annat säkert kännetecken för STILLEs nålförare är det öppna boxlåset vilket minskar risken för att nålföraren ska fastna i suturen eller kirurgens handskar. Samtidigt förenklas rengöring och sterilisering. Knäppets unika utformning ser till att nålföraren hålls stängd i ett säkert läge samtidigt som den är enkel att öppna igen. Alla dessa egenskaper ligger bakom den där speciella känslan som instrument från STILLE ger.

För exakt matchning av suturer och nålförare, se separat guide för passande suturstorlek till varje nålförare.

A PERFECT RESULT WHEN SUTURING requires a reliable and durable instrument. STILLE needle holders are easily recognized by their delicate and soft design, which helps the surgeon to hold the needle very securely. The golden finger loops indicate that the jaws are fitted with inserts of hard metal, which prolongs the life of the instrument. Some needle holders are instead coated with Diamond Jaws where hard metal is sprayed on as a thin layer on the inside of the jaws.

Another feature of STILLE's needle holders is the open box lock. This reduces the risk of the needle holder being caught in the sutures or the surgeon's gloves. It also simplifies the cleaning and sterilization process. The ratchet's unique design ensures that the instrument stays closed in a safe position while remaining easy to open. All of these features are characteristic of that special feel that instruments from STILLE provide.

For precise matching of sutures and needle holders, see the separate guide for matching suture size to individual needle holders.

THESE DOUBLE-ACTION BONE RONGEURS allow the surgeon to gently and smoothly cut bone with one hand. STILLE invented this double-action solution as early as 1872 and since then, both our bone cutters and rongeurs have been widely imitated. But the original is always better than the imitation, and are perceived by many surgeons as more graceful and easier to use than any other brand.

Double-action bone rongeurs increase the force at the cutting surface when cutting bone with maximum leverage. The special design means that they do not obstruct the view of the operative area. They can be used for orthopaedics, neurosurgery and plastic surgery.

STILLE bone rongeurs are not riveted at the joints, but are assembled using precision screws instead. This means that they can be easily taken apart for sharpening and service, which prolongs the life of the instrument considerably. Choosing original STILLE bone rongeurs is a worthwhile investment and offers a unique feel and ultra precision.

MED DUBBELLEDADE BENTÄNGER går det att klippa i benvävnad med bara en hand, mjukt och smidigt. STILLE uppfann den dubbelledade lösningen redan 1872 och sedan dess har såväl våra benavbitare som gougetänger ofta kopierats. Men originalet är alltid bättre än kopian och upplevs av många kirurger som gracilare och enklare att använda än alla andra fabrikat.

Dubbelledade bentänger ökar kraften vid skärytan när man klipper i ben vid maximal utväxling. Bentängernas speciella utformning gör att de inte skymmer sikten i arbetet. De kan användas inom både ortopedi, neurokirurgi och plastikkirurgi.

STILLES bentänger är inte nitade i lederna utan istället monterade med precisionsskruvar. Det gör att de lätt kan tas isär vid slipning och service vilket förlänger instrumentens livslängd avsevärt. Att investera i en original STILLE bentång lönar sig samtidigt som instrumentet erbjuder en unik känsla och precision.

EN KÄRLKLÄMMA MÅSTE GE EXAKT DET TRYCK som krävs för att stoppa en blödning på ett säkert men ändå atraumatiskt sätt. Stänger klämman inte korrekt om kärlet riskerar det att skadas.

Den approximala stängningen av käftarna mot den distala delen fördelar käftarnas tryck jämnt över blodkärlet. Därmed blir trycket så litet som möjligt, men ändå effektivt. En klämman måste även tåla den mekaniska spänning den utsätts för.

Ett annat säkert kännetecken för STILLEs kärklämmare är det öppna boxlåset, vilket minskar risken för att instrumentet ska fastna i vävnad eller kirurgens handskar. Samtidigt förenklas rengöring och sterilisering. Knäppets unika utformning ser till att kärklämmaren hålls stängd i ett säkert läge samtidigt som den är enkel att öppna igen. Knäppena på STILLEs kärklämmare är försedda med flera steg för att möjliggöra korrekt tryck över kärlet.

I sortimentet ingår också ett antal andra klämmare med samma unika STILLE-kvalitet, som t ex fattningstänger, dukklämmor och ringtänger.

A VASCULAR CLAMP MUST PROVIDE THE EXACT PRESSURE required to stop bleeding in a safe and atraumatic way. If the clamp closes improperly the vessel is likely to be damaged.

The closure of the jaws on the distal portion ensures pressure is evenly distributed over the blood vessel. Thus, the pressure is as small as possible while maintaining effectiveness. A clamp must also withstand the mechanical stress it is subjected to.

Another sure characteristic of STILLE's vascular clamps is the open box lock, which reduces the risk of the instrument getting stuck in the tissue or the surgeon's gloves, while simplifying the cleaning and sterilization process. The ratchet's unique design ensures that the instrument stays closed in a safe position while being easy to open. Closures on STILLE vascular clamps are fitted with several steps to allow various degrees of pressure on the vessel.

The range also includes a number of other clamps with the same unique STILLE quality, such as tissue grasping forceps, towel clamps and ring forceps.

DET ÄR VIKTIGT ATT HAKEN håller undan vävnaden varligt och atraumatiskt. Därför måste blad, klor och skaft vara så mjukt utformade som möjligt. STILLEs hakar har en design med perfekt rundade kanter och mjuk övergång till klor och blad. Ytan är alltid högglosspolerad för att effektivisera rengöringen och öka livslängden. Handtagen är särskilt utformade för att göra instrumenten bekväma att hantera. Flera modeller har försetts med ergonomiskt utformade handtag.

I sortimentet finns även ett antal självhållande hakar som exempelvis Adsonhakar, Perman bukhakar och revbensspridare.

IS IMPORTANT THAT A RETRACTOR holds the tissue gently and without causing trauma. Therefore, the blade, teeth and handle must be designed and shaped as smoothly as possible. STILLE retractors are designed with perfectly rounded edges and smooth transitions to blade and teeth. The instrument surface is always highly polished, which streamlines cleaning and increases longevity. The handles are specifically designed to ensure the instruments are comfortable to use. Several models have been equipped with ergonomically designed handles.

The range also includes a number of self retaining models such as Adson retractors, Perman abdominal retractors and rib spreaders.

Hakar | Retractors | Wundhaken | Divaricatori | Separadores | 開創器、鉤、レトラクター

The design of the handle ensures a comfortable grip.

Smooth and highly polished surface, very resistant to corrosion.

Perfectly beveled blades and prongs ensure atraumatic handling of tissues.

SCRAPING, UNCOVERING OR REMOVAL of soft and hard tissue and other precision work requires a light touch. The instruments must be strong, yet flexible enough to avoid damage.

STILLE offers an assortment of curettes, raspatories, dissectors and elevators of the very highest quality. The material is highly polished stainless steel with precisely the qualities that are so important for these types of instruments. The steel is hard enough to deal with hard bone tissue and to remain sharp, yet flexible enough to avoid damaging implants.

This instrument group also includes STILLE's well known uterine curettes. They are designed with shafts of unhardened stainless steel, which gives them the precise flexibility required. The instruments need not be coated with a surface layer of nickel, which prolongs durability and increases patient safety.

SKRAPNING, FRILÄGGNING ELLER BORTTAGNING av mjuk och hård vävnad samt andra precisa arbeten kräver ett lätt handlag. Instrumenten måste vara starka men samtidigt följsamma för att undvika skador.

STILLE erbjuder ett sortiment av kyretter, raspatorier, dissektorer och elevatorier av allra högsta kvalitet. Materialet är högglosspolerat rostfritt stål med just de egenskaper som är så viktiga för denna typ av produkter. Stålet är tillräckligt hårt för att hantera hård benvävnad och hålla sig vasst samtidigt som det måste vara följsamt för att inte skada implantat.

I den här produktgruppen ingår också STILLES välkända uteruskyretter. De tillverkas numera med skaft av ohärdat rostfritt stål vilket ger dem de precisa böjbara egenskaperna som behövs. Instrumentet behöver inte beläggas med ett yttskikt av nickel vilket förlänger hållbarheten och ökar patientsäkerheten.

OSTEOTOMER, MEJSLAR, GOUGEMEJSLAR och andra beninstrument från STILLE tillverkas i ett härdat kvalitetsstål med särskilt hög hårdhet för att undvika brytskador eller böjningar. Hårdheten ökar tåligheten mot slitage och stålets seghet avgör hur väl det står emot stora påfrestningar under lång tid.

Det är valet av material med precis rätt hårdhet (HRC-värde) i kombination med tillverkningsmetod som ger instrumentet dess unika skäregenskaper. Eggen är lagd i en perfekt vinkel för maximal skärprestanda. Spetsen är hård nog för att den inte ska fastna i benet. Samtidigt är den mjuk nog för att ge med sig i kontakt med implantat.

Specialslipningen gör att instrumenten förblir vassa under en längre tid innan de behöver slipas om. Handtagen är ergonomiskt utformade för ett handfast grepp. STILLE var först i världen med att tillverka osteotomer och instrumenten har genom åren blivit kända för sina unika egenskaper. Den klassiska STILLE-osteotomen är idag ett begrepp över hela världen.

OSTEOTOMES, CHISELS, MALLETS and other bone instruments from STILLE are made of high quality hardened steel, with particularly high strength to avoid breakage or bending. The hardness increases resistance to wear and the toughness of the steel determines how well the instrument can withstand great strain for long periods of time.

The choice of material with just the right hardness value (HRC) in combination with the manufacturing method provides the instrument with its unique cutting properties. The edges are placed at the perfect angle for maximum cutting performance. The tip is stiff enough so that it will not get caught in the bone, and soft enough to give way when in contact with implants.

Special sharpening techniques allow the instruments to remain sharp for extended periods before they need to be resharpened. The handles are ergonomically designed for a firm and comfortable grip. STILLE was the first in the world to manufacture osteotomes and over the years the instruments have become known for their unique properties. The classic STILLE osteotome is known the world over.

Osteotomer, mejslar etc. | Osteotomes, Chisels etc. |
Osteotome, Flachmeissel etc. | Osteotomi, Scalpelli etc. |
Escoplos, Cinceles etc. | 両刃のみ 片刃のみ

High HRC ensures that the instruments stay sharp.

Handle designed to ensure perfect grip and ergonomomy.

Highest quality steel and hardening for maximum life expectancy.

Special tip grinding for maximum cutting performance.

DE MEST KOMPLICERADE OPERATIONERNA inom mikrokirurgi kräver högsta precision ända in i minsta detalj. STILLES mikroinstrument är handgjorda av skickliga instrumentmakare och erbjuder perfekt precision och balans.

Sortimentet är i första hand inriktat mot plastikkirurgi och hjärta/-kärlkirurgi. Saxar, pincetter och nålförare finns i flera olika längder och utföranden för att passa alla kirurgers unika önskemål. De svarta handtagen indikerar att instrumentet är ett äkta STILLE-instrument.

THE MOST COMPLEX MICROSURGICAL PROCEDURES require precision down to the finest detail. STILLE micro instruments are handmade by skilled craftsman and provide perfect precision and balance.

The instrument range is primarily focused on plastic surgery and cardio/-vascular surgical procedures. Scissors, forceps and needle holders are available in various lengths and designs to suit any surgeon's unique requirements. The black handles indicate that the instrument is an authentic STILLE design.

Mikroinstrument | Micro instruments | Mikro-instrumente | Strumenti per microchirurgia | Instrumentos para microcirugia | マイクロ器具

STILLE mikrosax | STILLE Micro Scissors

MIKROSAXAR

Samtliga mikrosaxar från STILLE är försedda med SuperCut-blad för maximal skärstyrka med minimal kraft och högsta precision ända ut i spetsen. De finns i flera modeller som är raka eller böjda, trubbiga eller spetsiga samt vinklade blad för kärlkirurgi. Mjuka kanter skonar såväl känslig vävnad som suturer och kirurghandskar.

MICRO SCISSORS

All micro scissors from STILLE feature SuperCut blades for maximum cutting power with minimal effort and precision all the way to the tip. There are several models including straight or curved, blunt, pointed and angled blades for vascular surgery. Soft edges protect both sensitive tissue sutures and surgical gloves.

STILLE mikropincett | STILLE Micro Forceps

MIKROPINCETTER

Nyper tag lika försiktigt men bestämt som ett par mjuka fingertoppar. Finns i raka och böjda modeller med och utan tänder, suturplattform, ringspetsar och motvikt. Den perfekta fjädringen ger samma känsla som hos övriga STILLE-instrument. Diamond Jaws ger en mer slitstark pincett och är utmärkt för att hantera fina mikronålar.

MICRO FORCEPS

Tweezing requires sensitivity, gently but firmly like a pair of soft fingertips. Available in straight and curved designs with or without teeth, suture platform, ring tips and counterweight. Perfect spring tension provides the same outstanding feel as other STILLE instruments. Diamond Jaws provide more durability and are excellent for handling fine micro-needles.

STILLE mikronålförare | STILLE Micro Needle Holder

MIKRONÅLFÖRARE

Håller även de minsta suturerna i ett varsamt men säkert grepp med minsta möjliga tryck från fingrarna. Spetsarna har försetts med Diamond Jaws för ökad slitstyrka. Finns i olika längder, raka eller böjda modeller samt med eller utan lås. Passar suturstorlek 6/0 eller mindre.

MICRO NEEDLE HOLDERS

Holds even the smallest suture needles in a gentle but firm grip with minimal finger pressure. The tips feature Diamond Jaws for increased wear resistance. Available in various lengths, straight or curved models, with or without locks. Suitable for suture size 6/0 or smaller.

STILLE SuperCut XE mikrosax | STILLE SuperCut XE Micro Scissors

Fine micro scissors with straight, sharp tips or curved blunt tips. All models with SuperCut blades.

STILLE ERBJUDER ett antal övriga instrument som komplement till huvudsortimentet. Här finns exempelvis unika produkter som STILLES artroskopikanyler, STILLE Hemostop och instrumentvårdsprodukter. Här kan man också hitta vårt utvalda sortiment av ortopediska implantat av högsta kvalitet, där Palmerstift, Wibergmärlor och Kirschner trådborrar ingår.

STILLE OFFERS a number of various instruments as a complement to the main offering. Included here are among other products, STILLE Arthroset, STILLE Hemostop and instrument care products. In this section we also offer a selected range of top quality orthopaedic implants, such as our well-known Palmer bone nails, Wiberg fracture staples and Kirschner wire drills.

DR. CLARENCE CRAFOORD, professor i thoraxkirurgi vid Karolinska institutet samt överläkare vid Sabbatsbergs sjukhus. En pionjär inom thoraxkirurgi som genomförde världens första operation av kärlmissbildning vid medfött hjärtfel. Utvecklade tillsammans med STILLE, bland annat pincetter och peanger som än idag bär hans namn.

DR. CLARENCE CRAFOORD, professor of thoracic surgery at the Karolinska Institute and Chief Physician at Sabbatsberg Hospital. A pioneer in thoracic surgery who conducted the world's first operation for vascular malformation of congenital heart defects. Developed in collaboration with STILLE forceps and artery forceps, which still bear his name.

Garanti | Guarantee | Garantie | Garanzia | Garantie

Hanteringsanvisningar

Följande råd och skötselansvisningar har framtagits för att ni skall få största möjliga nytta och glädje av samt optimal livslängd på kirurgiska instrument från STILLE. Dessutom är villkoret för STILLES garantiåtagande att instrumentet hanteras och sköts i enlighet med nedan angivna instruktioner.

1. Hantera instrument varsamt, detta gäller instrument i allmänhet och mikroinstrument i synnerhet.
2. Rengör instrumentet manuellt eller maskinellt så fort som möjligt efter användning. Låt ej föroreningar torka in på instrumentet. Rengöring med metoder som innehåller väteperoxid rekommenderas ej på instrument med svartkrom. Dessa kan bli flammiga, dock påverkas inte funktionen.
3. Förvara inte instrument i fuktigt miljö längre än absolut nödvändigt, t.ex. i avvaktan på transport till sterilcentral. Använd endast för ändamålet avsedda lösningar.
4. Låt inte instrument ligga i mekanisk spänning, t.ex. knäppata eller intrasslade i andra instrument. Det föreligger då risk för spänningskorrosion. Instrument med knäppen skall lämnas öppna. Lägg de tyngsta instrumenten underst med de lättare ovanpå. Mikrokirurgiska instrument skall aldrig läggas ovanpå varandra.
5. Vatten och vattenånga för rengöring, desinfektion och autoklivering kan innehålla salter, metaller och mineraler, vilka kan orsaka korrosion och missfärgningar. Kontrollera vattenkvaliteten. Hårt vatten bör mjukgöras. Slutsköljning av instrument med demineraliserat vatten rekommenderas.
6. Följ alltid fabrikantens anvisningar vid användning av diskdesinfektor och diskmedel. Använd ett diskmedel med pH-värde mellan 8–10,5 i korrekt dosering enligt tillverkarens anvisningar. Förvara inte instrumentet under längre tid i lösningen än vad fabrikanten angivit. Skölj, helst med demineraliserat vatten. Torka instrumentet omedelbart.
7. Använd endast för ändamålet avsedda desinfektionslösningar vid manuell rengöring. Var noga med att följa fabrikantens anvisningar vad gäller dosering och tid. Förvara inte instrumentet under längre tid i lösningen än vad fabrikanten angivit. Skölj, helst med demineraliserat vatten. Torka instrumentet omedelbart.
8. Vid användning av ultraljud för rengöring skall instrumentet vara helt täckt med vätska samt vara öppet. Instrument med ytbeläggning skall ej rengöras i ultraljud. Skölj, gärna med demineraliserat vatten. Torka noga. Följ fabrikantens anvisningar.
9. Kontrollera instrument med avseende på föroreningar, repor, missfärgningar, sprickor, korrosion.
10. Kontrollera varje enskilt instruments funktion.
11. Använd endast instrumentborstar. Stålull får aldrig användas.
12. Anolj instrument, på ställen där metall nöter mot metall, efter varje användning. Anoljning görs lämpligen omedelbart före sterilisering. Använd gärna STILLES instrumentolja. Oljan måste ha en flampunkt över 1350C. Använd endast ringa mängd olja på ytor som möts vid funktion (saxskär, boxlås, skruvar, spärrlås). Torka bort överflödiga olja för undvikande av kladdiga instrument samt fettfläckar på autoklaveringsförpackningen.
13. Följ noga fabrikantens anvisningar vid autoklivering. Var noga med att inte packa instrumenten hårt. Instrument skall autoklaveras "öppna" för

att ångan skall kunna nå alla delar av ett instrument.

14. Hetluftsterilisering rekommenderas ej. Hög temperatur påverkar metall-len.
15. Väteperoxidsterilisering rekommenderas ej för svartkromade instrument. Dessa kan bli flammiga, dock påverkas inte funktionen.
16. Nya instrument måste rengöras, inspekteras, anoljas samt steriliseras före första användning.
17. Använd endast professionell reparatör/verkstad för service och reparationer. T.ex. måste Super Cut –saxar slipas på ett speciellt sätt, annars är det lätt att förstöra eggen. Vid felaktigt utförd reparation/ service gäller ej STILLES garantiåtagande!

Garanti

Med avseende på utförande och material lämnar vi garanti på kirurgiska handinstrument av egen tillverkning. I en period av 30 år efter inköp, ersätter eller reparerar vi kostnadsfritt ett skadat instrument om skadan finnes orsakad av fel i utförande eller material. Normal förslitning omfattas inte av vår garanti. Utfästelsen gäller under förutsättning att instrumentet används för avsett ändamål samt vårdas och lagras korrekt och att skriftlig anmälan görs till STILLE inom 30 dagar från skadetillfället.

Instrument Care

The following advice and care instructions have been drawn up to achieve the maximum utilization and optimal length of life from STILLE's surgical instruments. In addition, one of the conditions of STILLE's guarantee commitments is that instruments are handled and cared for according to the instructions stated below.

1. Handle instruments carefully. This applies to instruments in general but particularly to micro instruments.
2. Clean instruments manually or by machine as soon as possible after use. Do not allow contaminants to dry on instruments. Cleaning with any method containing hydrogen peroxide is not recommended for black chrome plated instruments (eg SuperCut scissors).
3. If cleaning must be delayed, store the instruments in an appropriate solution. Do not just use water.
4. Do not allow instruments to remain under mechanical stress since this increases the risks for corrosion and damage. Instruments must not be allowed to lie in a disorganized manner. Instruments with ratchets must be left open. The heaviest instruments on the bottom with lighter instruments above. Microsurgical instruments should never be laid on top of each other.
5. Water and steam used for cleaning, disinfection and auto-claving may

contain salts, metals and minerals that can cause corrosion and discoloration. Check the quality of the water; hard water should be softened. Final rinsing of instruments with demineralized water is recommended.

6. Always follow the manufacturer's instructions when using disinfectants and detergents. Use a detergent with a pH-value between 8–10.5 in correct dosage according to the manufacturer's instructions. Do not store the instrument in the solution longer than indicated by the manufacturer. Rinse, preferably with demineralized water. Dry the instrument immediately.
7. Only use disinfection solutions intended for this purpose. Follow the manufacturer's instructions. Rinse, ideally with demineralized water. Dry the instruments.
8. When using ultrasound for cleaning, instruments should be opened and completely covered with cleaning solution. Coated instruments should not be cleaned in ultrasound. Rinse, ideally with demineralized water. Dry carefully. Follow the manufacturer's instructions.
9. Check instruments for contaminants, scratches, discoloration, cracks and corrosion.
10. Check the function of each individual instrument.
11. Use only instrument brushes. Steel wool should never be used.
12. After the cleaning process, lubricate the instruments where metal is in contact with metal. Use preferably STILLE instrument oil. The oil must have a flashpoint above 135 °C. Use only small amounts of oil on surfaces that are in contact during function (scissors edges, box locks, screws). Clean off excess oil to avoid oily instruments and oily stains on autoclave packaging. If a water-soluble lubricant is used instead of instrument oil, the solution should be diluted with demineralized water. Follow the manufacturer's instructions.
13. Follow the manufacturer's instructions for autoclaving. Instruments should be autoclaved open to allow steam to gain access to all parts of the instruments.
14. Hot air sterilisation is not recommended, as high temperature will affect the metal.
15. Hydrogen peroxide sterilisation is not recommended for black chrome plated instruments. These can become stained although function will not be affected.
16. New instruments must be cleaned, inspected, lubricated and sterilised before they are used for the first time.
17. Use only a professional instrument engineer/workshop for service and repairs. For example, Super Cut scissors must be ground in a special way otherwise the edges may be destroyed. If repairs/service are incorrectly carried out, STILLE's guarantee commitments no longer apply!

Guarantee

Surgical hand instruments manufactured by STILLE carry a guarantee in respect of materials and workmanship. For a period of 30 years after purchase, we will replace or repair a damaged instrument free of charge if the damage is found to have been caused by a defect in materials or workmanship. The guarantee is conditional on the instrument being used for the purpose intended, is cared for and stored correctly and that any claims are made in writing within 30 days of the damage occurring.

Gebrauchsanweisungen

Die folgenden Ratschläge und Gebrauchsanleitungen haben wir für Sie gemacht, damit Sie den grösstmöglichen Nutzen und Freude, sowie eine optimale Lebensdauer an chirurgische Instrumente von STILLE haben werden. Unsere Garantie ist auch mit der Bedingung verbunden, dass unsere Instrumente nach unseren Instruktionen behandelt und gepflegt werden.

1. Gebrauchen Sie die Instrumente mit Vorsicht, ganz besonders die Mikroinstrumente.
2. Beseitigen Sie den Schmutz, manuell oder maschinell, direkt nach Gebrauch. Lassen Sie den Schmutz nie in das Instrument eintrocknen. Für schwarz verchromte Instrumente (z. B. SuperCut-Scheren) wird eine Reinigung mit Wasserstoffperoxid nicht empfohlen.
3. Lassen Sie die Instrumente nie länger als notwendig in feuchten Zustand liegen, z.B. beim Abwarten auf Transport zur Sterilzentrale. Benützen Sie nur die für das Instrument bestimmten Desinfektionsmittel.
4. Lassen Sie die Instrumente nicht in mechanischer Spannung, z.B. zusammengespannt oder mit anderen Instrumenten durcheinander liegen. Es kann sonst zu Spannungskorrosion kommen. Legen Sie die schwersten Instrumente nach unten und die leichteren oben drauf. Mikrochirurgische Instrumente dürfen niemals aufeinander liegen.
5. Wasser und Wasserdampf für Reinigung, Desinfektion und Sterilisierung können Salze, Metalle und Minerale enthalten die Korrosion und Verfärbungen verursachen können. Kontrollieren Sie die Wasserqualität. Hartes Wasser muss enthärtet werden. Für die Schlusspülung des Instrumentes empfehlen wir demineralisiertes Wasser.
6. Folgen Sie immer den Anweisungen des Herstellers bei Verwendung von Desinfektions- und Reinigungsautomaten, sowie beim Spülmittel. Verwenden Sie ein Reinigungsmittel mit einem pH-Wert von 8 - 10,5. Dosierungsangaben des Herstellers beachten! Die Instrumente dürfen nicht länger als vom Hersteller angegeben in der Lösung liegen. Das Spülen sollte mit vollentsalztem Wasser erfolgen. Trocknen Sie das Instrument sofort.
7. Benützen Sie nur die für das Instrument vorgeschriebene Desinfektionslösung bei manueller Reinigung. Richten Sie nach den Anweisungen des Herstellers wegen Dosierung und Zeit. Die Instrumente dürfen nicht länger als vom Hersteller angegeben in der Lösung liegen. Spülen Sie am besten mit demineralisiertem Wasser. Trocknen Sie das Instrument hinterher.
8. Bei Ultraschallbehandlung muss das Instrument ganz in der Lösung und offen liegen. Beschichtete Instrumente dürfen nicht mit Ultraschall gereinigt werden. Spülen Sie mit demineralisiertem Wasser nach. Seien Sie sorgfältig beim Trocknen. Befolgen Sie die Anweisungen des Herstellers.
9. Kontrollieren Sie das Instrument auf Schmutz, Risse, Verfärbungen, Brüche und Korrosion.
10. Kontrollieren Sie jede einzelne Funktion des Instrumentes.
11. Bei der Reinigung verwenden Sie nur besondere für Instrumente geeignete Bürsten. Stahlwolle darf nie gebraucht werden. Es kann sonst zu Rissen und Eisenspänen auf dem Instrument kommen, was zur Korrosion führen kann.
12. Ölen Sie das Instrument leicht ein an Stellen, wo sich das Metall trifft (z.B. Scherenblätter, Box-Schlösser, Schrauben, Rasten) nach jedem Gebrauch. Die Einölung wird am besten vor der Sterilisierung vorgenommen. Wir empfehlen die Verwendung von Instrumentenöl von STILLE. Das Öl muss einen Entflammbarkeitsgrad von über 135 Grad Celsius haben. Trocknen Sie überflüssiges Öl auf, um schmierige Instrumente und Fettflecke auf den Steril-Verpackungen zu vermeiden.
13. Folgen Sie den Anweisungen des Herstellers sehr genau bei der Sterilisierung. Es ist wichtig das man die Instrumente nicht zu hart packt. Die

Instrumente sollen in offenem Zustand sterilisiert werden, damit der Dampf an alle Teile des Instrumentes kommt.

14. Wir empfehlen keine Heissluftsterilisierung. Die hohen Temperaturen schaden dem Metall.
15. H2 O2 Sterilisierung empfehlen wir nicht für schwarzverchromte Instrumente. Sie können flammig werden. Die Funktion wird dagegen nicht beeinträchtigt.
16. Neue Instrumente müssen gereinigt, kontrolliert, eingeölt und sterilisiert werden vor dem ersten Gebrauch.
17. Für Service und Reparaturen machen Sie nur von professionellen Reparateuren/Werkstätten Gebrauch. Z.B. müssen Super Cut-Scheren speziell geschliffen werden, damit die Schneide nicht zerstört wird. Bei falsch ausgeführter Reparatur/Service gilt nicht die STILLE-Garantie.

Garantie

Wir übernehmen, auf Ausführung und Material von chirurgischen Instrumenten eigener Herstellung eine Garantie von 30 Jahren d.h., wir ersetzen oder reparieren kostenlos beschädigte Instrumente, bei denen die Ausführung oder das Material fehlerhaft ist. Diese Garantie erstreckt sich nicht auf den normalen Verschleiss. Die Garantieverpflichtung ist gültig unter der Voraussetzung, dass die Instrumente für vorgesehenen Zweck verwendet und fachgemäss gepflegt werden, sowie dass eingetretener Schaden uns innerhalb von 30 Tagen schriftlich mitgeteilt wird.

Trattamento degli strumenti chirurgici

I seguenti consigli e prescrizioni permettono di ottenere le migliori prestazioni e una lunga durata degli strumenti chirurgici STILLE. La garanzia STILLE é valida solo se vengono rispettate le istruzioni indicate.

1. Trattare tutti gli strumenti chirurgici con cura, in particolare gli strumenti per microchirurgia.
2. Pulire lo strumento immediatamente dopo l'utilizzo, a mano o meccanicamente. Non permettere alle impurità di indurire sugli strumenti. Non utilizzare prodotti contenenti perossido di idrogeno per la pulizia di strumenti con cromatura nera (ad esempio forbici SuperCut).
3. Non lasciare gli strumenti in ambiente umido più di quanto sia necessario, ad es. in attesa di essere trasportati al centro di sterilizzazione. Usare soluzioni appropriate, non acqua.
4. Per evitare il rischio di corrosione per tensione, non sottoporre lo strumento a tensione meccanica: in stato chiuso o intricato con altri strumenti. Strumenti a cremagliera devono rimanere aperti. Posare gli strumenti leggeri sopra quelli più pesanti. Gli strumenti per microchirurgia vanno sistemati uno vicino a l'altro.
5. Acqua e vapore utilizzato per la pulitura, la disinfezione e nell'autoclave possono contenere sali, metalli e minerali, i quali possono provocare cor-

rosione e colorazioni. Verificare le caratteristiche dell'acqua. L'acqua che contiene una concentrazione troppo elevata di sali e di cloro deve essere filtrata e trattata. Si consiglia l'uso di acqua demineralizzata, soprattutto per la risciacquatura finale.

6. All'uso di prodotti per la disinfezione e la pulitura rispettare sempre le prescrizioni del produttore. Utilizzare un detergente con pH 8-10,5, dosaggio secondo le istruzioni del produttore. Non lasciare lo strumento nella soluzione più a lungo di quanto indicato dal fabbricante. Risciacquare, preferibilmente utilizzando acqua demineralizzata. Asciugare immediatamente.
7. Per la pulitura manuale usare unicamente soluzioni disinfettanti prescritte. Seguire attentamente le istruzioni per quanto riguarda la dose e la durata. Non lasciare gli strumenti nella soluzione più a lungo di quanto prescritto. Sciacquare con acqua demineralizzata e asciugare immediatamente.
8. Per la pulitura ad ultrasuoni lo strumento deve essere aperto e completamente immerso nella soluzione. Gli strumenti rivestiti non devono essere puliti ad ultrasuoni. Risciacquare con acqua demineralizzata e provvedere ad un'asciugatura completa e immediata.
9. Controllare che non ci siano residui, scalfitture, scolorimenti, fessure o macchie di corrosione sullo strumento.
10. Controllare il funzionamento di ogni strumento individualmente.
11. Usare unicamente spazzole morbide per strumenti - mai spugne o spazzole metalliche
12. Lubrificare lo strumento dopo ogni uso, nei punti di contatto tra le parti metalliche, immediatamente prima della sterilizzazione. Si consiglia olio STILLE per strumenti. In ogni caso si deve usare olio con punto d'infiammabilità superiore a 135 ° C. È sufficiente una goccia sulle superficie a contatto (filo delle forbici, cerniere ad incastro, fermagli, vite e tacche d'arresto). Rimuovere l'olio eccessivo per evitare strumenti grassi e macchie sul materiale d'imballaggio per l'autoclave.
13. Rispettare scrupolosamente le prescrizioni del costruttore degli sterilizzatori. Non imbappare troppo forte. Gli strumenti devono essere aperti durante la sterilizzazione, permettendo al vapore di raggiungere tutte le parti dello strumento.
14. Sconsigliamo sterilizzazione a secco. Temperature alte possono alterare la struttura del metallo.
15. La sterilizzazione con acqua ossigenata non é consigliabile per strumenti cromati di nero. Detta procedura non compromette la funzione, ma le superficie nere si scoloriscono.
16. Strumenti nuovi devono essere puliti, controllati, oliati e sterilizzati prima del primo uso.
17. Riparazioni e manutenzione devono essere eseguite da professionali. Per esempio le forbici Super Cut (una lama da forcice e una lama da coltello) devono essere affilate in modo speciale per non rovinare il filo. La garanzia STILLE non é valida per riparazioni effettuate in modo erroneo.

Garanzia

Lo strumentario chirurgico della nostra propria produzione é coperto da una garanzia di 30 (Trenta) anni contro qualsiasi difetto di fabbricazione o di qualità del materiale usato. Ci impegniamo a ripararlo o a rimpiazzarlo a nostre spese, sempre se é un difetto di produzione o di materiale. La garanzia non copre il logoramento normale, neppure difetti dovuti a mancata manutenzione. Questo impegno é valevole a condizione che gli strumenti siano usati per lo scopo previsto e che siano custoditi e mantenuti in modo professionale, e che il reclamo per iscritto ci pervenga entro 30 giorni a partire dalla data di constatazione del guasto.

Tratamiento del instrumental quirúrgico

Hemos desarrollado los siguientes consejos e instrucciones de mantenimiento para que Ud. obtenga el mayor rendimiento y duración de los instrumentos quirúrgicos de STILLE. Asimismo, el compromiso de garantía de STILLE sólo es válido si el instrumento se utiliza y cuida según las instrucciones indicadas a continuación.

1. Trate el instrumento con cuidado. Este punto es aplicable a todos los instrumentos en general y a los microinstrumentos en particular.
2. Limpie el instrumento, a mano o a máquina, tan pronto como sea posible tras su utilización. No deje secar partículas extrañas en el instrumento. No se recomienda ningún método de limpieza que contenga hidrógeno de peróxido para instrumentos de cromadura negra (ej: Tijeras SuperCut).
3. No conserve el instrumento en un ambiente húmedo más tiempo del necesario, por ej. mientras espera su transporte a la central de esterilización. Utilice únicamente los métodos adecuados para cada caso.
4. No deje los instrumentos en tensión, por ej. cerrados o enredados con otros instrumentos. En estos casos aumenta el riesgo de corrosión. Los instrumentos con cierre deben dejarse abiertos. Coloque los instrumentos más pesados debajo y los más ligeros encima. No coloque nunca los instrumentos microquirúrgicos unos encima de otros.
5. El agua y vapor de agua para la limpieza, desinfección y esterilización con autoclave pueden contener sales, metales y minerales que pueden provocar corrosión y manchas. Controle la calidad del agua. El agua dura debe ablandarse. Se recomienda el enjuague final del instrumento con agua desmineralizada.
6. Siga siempre las instrucciones del fabricante al usar productos desinfectantes y de limpieza. Utilice un detergente con un pH comprendido entre 8-10.5 a una dosis correcta según las instrucciones del fabricante. No almacene el instrumento en la solución por un tiempo mayor al indicado por el fabricante. Remoje, preferiblemente con agua desmineralizada. Seque el instrumento inmediatamente.
7. Al limpiar a mano, utilice únicamente soluciones desinfectantes adecuadas. Siga las instrucciones del fabricante en lo que respecta a dosificación y tiempo. No tenga el instrumento en la solución más tiempo del indicado por el fabricante. Enjuáguelo, preferentemente con agua desmineralizada. Seque el instrumento inmediatamente.
8. En caso de utilizar ultrasonido para la limpieza del instrumento, éste debe estar abierto y completamente cubierto con la solución de limpieza. Instrumentos con revestimiento no deben ser limpiados con ultrasonido (ej: instrumentos con niquelado). Enjuáguelo, preferentemente con agua desmineralizada. Séquelo cuidadosamente. Siga las instrucciones del fabricante.
9. Controle el instrumento para evitar la aparición de suciedad, rayas, manchas, estrías y corrosión.
10. Controle la función de cada instrumento por separado.
11. Utilice únicamente cepillos para instrumentos. No utilice nunca estropajos de acero.
12. Después de cada uso, ponga aceite en el instrumento en los lugares en los que el metal esté en contacto con metal. El mejor momento para poner aceite es justo antes de la esterilización. Utilice preferentemente el aceite para instrumentos de STILLE. El aceite debe tener un punto de inflama-

ción por encima de 135°C. Utilice el aceite con moderación en superficies que entran en contacto durante el uso (hojas, cierres y tornillos). Quite el aceite sobrante para evitar tener instrumentos grasientos y la aparición de manchas de grasa en el envase de esterilización con autoclave.

13. Siga las instrucciones del fabricante en la esterilización con autoclave. No coloque demasiados instrumentos a la vez. Durante la esterilización con autoclave, los instrumentos deben estar "abiertos" para que el vapor llegue a todos los rincones de cada instrumento.
14. No se recomienda la esterilización con aire caliente. Las elevadas temperaturas repercuten en el metal.
15. No se recomienda la esterilización con peróxido de hidrógeno para instrumentos de cromo negro. El color de estos instrumentos puede cambiar, aunque su funcionalidad no se vea afectada.
16. Antes de su primera utilización, limpie, controle, ponga aceite y esterilice todos los instrumentos nuevos.
17. Utilice únicamente un especialista/taller profesional para servicio y reparaciones. Por ej. las tijeras de Super Cut deben afilarse de modo especial, en caso contrario es fácil destruir la parte cortante. Si una reparación/servicio se realiza de modo incorrecto, la garantía de STILLE no es válida.

Garantie

El instrumental quirúrgico de nuestra propia fabricación tiene una garantía de 30 (Treinta) años contra cualquier defecto de manufacturación o calidad del material empleado, obligándonos a reemplazarlo o repararlo sin cargo alguno, siempre que sea debido a defectos del material o de su fabricación. El desgaste normal por su uso, queda excluido de dicha garantía. Esta garantía queda condicionada a que el instrumental sea utilizado para la finalidad prevista siendo cuidado y conservado de acuerdo con nuestras instrucciones y debiendo comunicar su deterioro por escrito dentro de los 30 días a partir del mismo.

DR. LARS LEKSELL, professor i neurokirurgi vid Lunds universitet och Karolinska institutet, kirurg vid Serafimerlasarettet och Sundsvalls lasarett samt ledamot av Kungliga Vetenskapsakademien. Uppfann strålkniven Leksell Gamma Knife 1951. Utvecklade tillsammans med STILLE den mycket populära gougetången som bär namnet STILLE-Leksell.

“Det var ett intensivt arbetsamt liv, som Albert Stille kunde blicka tillbaka på när han 1880 lämnade över den tekniska ledningen av sin firma till sonen Max. Från morgon till kväll var han på verkstaden och på kontoret, knappast unnande sig någon ro ens under måltiderna. Arbetet följdes av stor framgång tack vare hans gedigna kunskaper, hans utomordentliga skicklighet i yrket och hans konstnärssinne. När det gällde att finna på nya metoder och nya instrument svek aldrig hans intresse, och han lät sig ej avskräckas av någon svårighet.”

Ur “STILLE 1841-1941 – Återblick på en hundraårig verksamhet”

“It was a hectic working life that Albert Stille looked back on in 1880 when he handed over the technical management of the company to his son Max. From morning to night he was at the shop and in the office, scarcely allowing himself to rest even at mealtime. The work was followed by great success due to his extensive knowledge, his outstanding skill in the profession and his inventive mind. When it came to finding new methods and new instruments his interest remained strong, and he allowed himself not to be discouraged by any difficulty that arose.”

From “STILLE 1841-1941 - Flashback on a century of operation”

HANTVERK HELA VÄGEN. Att skapa kvalitetsinstrument är ett hantverk hela vägen – från instrumentmakaren till kirurgen. Passionen, yrkesskickligheten och fingertoppskänslan har de gemensamt. Och genom deras nära samarbete vidareutvecklas instrumenten. Sortimentet är specialiserat på tre områden – plastikkirurgi, ortopedi samt klassiska STILLE-instrument för flera olika kirurgiska discipliner. Gediget hantverk, suverän funktion och överlägsen kvalitet är de unika instrumentegenskaper som gör att STILLE efterfrågas av kirurger över hela världen.

CRAFTSMANSHIP ALL THE WAY. Creating quality instruments is an art form every step of the way – from the instrument maker to the surgeon. Passion, professionalism and flair are common attributes. And through their close collaboration these precision instruments are fine-tuned and developed further. The product range is specialized in three areas – plastic surgery, orthopedics and classic STILLE instruments for various other surgical disciplines. True craftsmanship, outstanding performance and superior quality are the unique characteristics that make STILLE the hands down choice of surgeons worldwide.

Surgical Perfection. For life.
